W05-p1: Use megamenu to show class demo w1~W4 locally

W05-P2: Show W05-P1 in Vercel, add github and globe icons for Github and Vercel

w05-p3: P5_61 -- Display Menu Items from menu json array on both local and vercel

The image displays a web development project in progress, showing code, a menu demo, and a live preview.

Code Editor (Left): The code shows a JavaScript function `displayMenuItems` that iterates over a `menu` array and creates menu items. The `menu` array contains three items: `Buttermilk Pancakes`, `Diner Double`, and `Godzilla Milkshake`. The code uses `const` and `let` for variable declarations and includes a `console.log` statement.

Menu Demo (Top Right): This section shows a preview of the menu items. Each item includes an image, a title, a price, and a description. The items are: `Buttermilk Pancakes` (15.99), `Diner Double` (13.99), and `Godzilla Milkshake` (6.99).

Live Preview (Bottom): The live preview shows the final rendered menu. The menu is titled "Our Menu" and lists the three items with their respective images, titles, prices, and descriptions. The items are: `Buttermilk Pancakes` (15.99), `Diner Double` (13.99), and `Godzilla Milkshake` (6.99).

Console (Right): The console shows a warning message: "Warning: Failed to load resource: the server responded with a status of 404 ()". This message is related to the `show-classdemo` component.

W05-P4: Display Menu buttons from categories array (do it by yourself)

The screenshot shows a development environment with a web application. The left pane displays the code editor with JavaScript and HTML. The right pane shows the browser preview of the 'Our Menu' page. The browser preview has a red box around the filter buttons and another around the menu items. The code editor also has a red box around the filter buttons logic.

```
const categories = ['all', 'breakfast', 'lunch', 'dinner', 'shakes']
const displayMenuButtons = () => {
  let displayMenuButtons = categories.map((item) => {
    const { all, breakfast, lunch, dinner, shakes } = item;
    return (
      <button type="button" class="filter-btn" data-id="{item}" {item}/>
    );
  }).join('');
  console.log('displayMenuButtons', displayMenuButtons);
  <button type="button" class="filter-btn" data-id="all">all</button>
  <button type="button" class="filter-btn" data-id="breakfast">breakfast</button>
  <button type="button" class="filter-btn" data-id="lunch">lunch</button>
  <button type="button" class="filter-btn" data-id="dinner">dinner</button>
  <button type="button" class="filter-btn" data-id="shakes">shakes</button>
}
```
